**Legend**

- Order Limits
- 2.5km study area (500m interval offsets from Section 3)
- Section 3 - Overbridge structures, side roads and access roads considered within ZTV
- Route alignment (Project) route not considered within ZTV

**Zone of Theoretical Visibility (ZTV): (1m DSM Mitigation)**

Section 3 - Vehicles on overbridge structures, side roads and access roads

Section 3 - Vehicles on route alignment

Area from which 1% to 33% of Section 3 of vehicles travelling on overbridge structures, side roads and access roads would be theoretically visible

Area from which 34% to 66% of Section 3 of vehicles travelling on overbridge structures, side roads and access roads would be theoretically visible

**Extent of visibility from other highway sections of the Lower Thames Crossing route (excluding Vehicles) shown on Figure 7.14**

Up to 4m high false cutting

**Notes**

- The Zone of Theoretical Visibility (ZTV) was created using Esri ArcGIS Pro (version 2.8). This is based on the combined 1m Digital Surface Model (DSM).
- The ZTV illustrates the area of theoretical visibility of the proposed highway alignment for the project and a view height of 2m and is limited to a 5km study area.
- The ZTV for vehicles travelling along route alignment and ZTV for overbridge structures, side roads and access roads have been run using an assumed maximum vehicle height of 4.5m.
- This figure shows theoretical visibility and therefore the worst case extent to which the Project could be visible from the surface level. In reality, visibility will be substantially less than shown on this figure, in particular within urban areas where forward views are typically screened by existing buildings or other features.
